Paper Rolls

Problem: The vertical up and down dimensions of the manipulator tooling are critical due to the large variation in roll heights and part orientations. The end-effector must prevent the rolls from telescoping when pitched down.

APPLICATION: Picking up paper rolls from a slitter with the core horizontal and transferring them to a pallet. The rolls will be either positioned horizontally or pitched 90° for vertical core positioning.

SOLUTION: A Simple Air Manipulator® (SAM P-112) allows simultaneous multifunction capabilities. Anti-telescoping O.D. gripper end-effector with an adjustable pad for various O.D.'s and a detachable hand control.
