

Product
Handled: **Engine Intake
Manifold**

Problem: Device must handle a variety of parts and part weights. Close work area makes it impossible to use a floor mounted unit. Cycle time is short.

APPLICATION: The application requires a very quick and light duty unit to assist the operator to install engine intake manifolds from a pallet stack to a moving automotive engine assembly line.

SOLUTION: Overhead mounted light duty X-Y rail system. Air balancer and mounting bracket. Light weight hook hung end effector with quick change contact points on tooling to fit various parts.
