

Product
Handled: **Foundry Shrouds**

Problem: A Foundry environment, extreme temperatures and molten metal were factors in choosing the correct handling solution. Customer had a limited budget to fulfill needs of a new workcell. Previous Positech Manipulator was taken out of service due to new workcell functions.

APPLICATION: Placing and removing shrouds from a funnel.

SOLUTION: Positech Partnership Plus enabled the rebuilding of the customer Model Taurus® (TPA-15) Manipulator. This included heat and dust resistant sleeves, enclosure insulation, a lift cylinder boot, replacement of the forearm spacer, tool rotation joint and gripper end effector with steel coped jaws. Start-up and training was supervised by Positech Personnel.
